Docket No. RSW920030287US1

ABSTRACT OF THE DISCLOSURE

METHOD AND APPARATUS FOR A CONTAINER MANAGED PERSISTENT ENTITY BEAN SUPPORT ARCHITECTURE

5

The present invention provides methods, apparatus and computer instructions for a container managed persistent support architecture that meets the Enterprise Java Bean (EJB) Specification. The support architecture

10 provides application programmers a model for balancing generated components with runtime code to better optimize flexibility and efficiency of applications. Six generated components: concrete bean, bean adaptor binding, injector, extractor, data cache entry and

15 function set, are used in combination with runtime code to perform typical operations of CMP entity beans.
